

## **ALAUX 01-15 - ANTICIPATED DISRUPTION OF AUXINFO AVAILABILITY**

12 JAN 2015

1. Due to the software application AUXINFO's lifecycle age, vendor supportability, and ever increasing threshold cyber security requirements, AUXINFO's utilization (<https://www.auxinfo.uscg.gov>) is in jeopardy of being discontinued. An important test of the application is planned for late January, 2015. Depending upon the test results, an outright suspension, termination, or otherwise unavailability of AUXINFO may ensue.
2. This test will not impact other Auxiliary information systems, including Auxiliary Directory, AUXDATA and sub-elements like Auxiliary order management functions. The Chief Director's Office (CG-BSX) and the National Executive Committee (NEXCOM) are diligently working with other Coast Guard Headquarters program managers to minimize AUXINFO access disruption and identify a long term solution.
3. To mitigate the negative administrative consequences of potentially losing AUXINFO availability in late January, the downloading of needed data like annual awards, quarterly reports, and other business processes that are generated through AUXINFO is strongly recommended.
4. AUXINFO status updates will be periodically provided. Thank you for your support and continued utilization of the Auxiliary administrative tools currently available.
