- **US Weather Radar**

Drill down - clicking on a specific location on the US map.

- **Wildfire / Flood / Earthquake & Volcano Data**

- 

#### Wildfire

This layer presents the best-known point and perimeter locations of wildfire occurrences within the United States over the past 7 days. Points mark a location within the wildfire area and provide current information about that wildfire. Perimeters are the line surrounding land that has been impacted by a wildfire.

#### Flood

Live Stream Gauges layer contains near real-time measurements of water depth from multiple reporting agencies recording at sensors across the world. This layer updates every hour. Flow forecasts are provided where available. These sensor feeds are owned and maintained by the GIS community via the [Community Maps Program](#).

#### Earthquake & Volcano

Real-time earthquake/volcano data, archived map statistics including current hazards and monitoring.

- **USCG District/Sector Map**

[USCG AUX](#) / [Q Directorate](#) / [USCG EM FB Page](#)
